DOCUMENT 2: ROBLOX APPEALS & CREATOR ECONOMIC FLAWS
Documented by: Hamgram77
==========

The Roblox appeals and publishing mechanics operate as a corporate profit-shield. The platform relies heavily on unyielding, bot-driven backends to absorb creator fees and lock users out of human recourse.

The core failures of the appeals and publishing pipelines include:

* The Infinite AI Support Loop:
  The support portal relies heavily on automated bots to handle appeals. When a ticket is filed, an AI scanner scrapes the text for keywords and instantly replies with a copy-pasted rejection template, completely bypassing human review.

* The "One and Done" Review Lockout:
  Under internal policies, once an appeal ticket is officially closed by the system, the decision is locked. If an automated bot handles and denies your initial appeal, getting a real human to reopen it or take a second look is nearly impossible.

* The Publishing Fee Forfeiture Exploit:
  Roblox guidelines state that publishing fees (1,000 Robux for games or 2,000 Robux for videos) are only forfeited during "major" moderation takedowns. However, the automated backend tracker is purely binary. If an asset receives even a minor false automated warning, the internal script marks the record as "moderated" and automatically voids your refund queue.

* AI Money Retention:
  When a developer opens a ticket arguing that a minor warning should not forfeit their publishing fee, the support bots spot words like "Refund" and "Robux" and auto-reject it with a generic template. The system is programmed to look the other way and keep the money.

* IP and Hardware Enforcement Traps:
  Roblox issues "enforcement bans" that automatically terminate accounts sharing the same Wi-Fi network, IP address, or hardware ID as a banned user. Innocent siblings or roommates lose their accounts, and appeals are routinely denied because the system defaults to assuming all linked accounts belong to the same rule-breaker.

* Total Lack of Diagnostic Transparency:

Moderation notices only provide generic reasons like "Misusing Roblox Systems." Because Roblox refuses to provide the exact chat logs, images, or script lines that triggered the ban, users are forced to appeal blindly. Developers must guess what code line the AI disliked, risking further bans if they re-upload.

* The 30-Day Expiration Cutoff:
If a user cannot break through the automated bot loop within 30 days of a ban, the system permanently locks the account record. Human support agents lose the physical ability to override or review the case after this hard deadline, turning false bot actions into permanent bans.
